OneStop Restaurant Menu

Kacheef White

Purpose of the Menu

- This menu application will display a simple menu to customers of OneStop Restaurant.

- The customers will have the ability to order a full sandwich meal with 12 options available using the interface.

- This will automate a large portion of services offered by the restaurant and reduce wait time.

Design of the Menu

- The Software is written using NetBean IDE 8.2.

- The software utilizes 3 main variables. This includes int option, int choice and Vector Order.

- Two main functions were developed. These were printMenu() and selectItem().

- Switch statements were heavily used in both functions.
